

Diploma Thesis

The purpose of the Diploma Thesis is to bring students into contact with scientific research in fields related to the subjects treated by the Department of Agriculture. It is prepared by the students of the Department in the last year of their studies under the supervision of a member of the educational staff of the Department.

Upon successful completion of the Diploma Thesis, the students will have acquired important knowledge and skills regarding how to conduct the research process.

Specifically:

- Students will have acquired experience and skills in managing both scientific data and available time.
- They will be able to search scientific databases and carry out the collection and evaluation of available literature sources as well as agricultural research methodologies.
- They will have understood how to conduct scientific research, design the experimental procedure, collect and process the results and draw conclusions and therefore be able to carry out a research project.
- Finally, they will have acquired the ability to write a scientific text and present the results of the study before a three-member committee and an audience.
