

### **Geology – Hydrogeology**

The course provides the basic knowledge for a variety of courses related the Natural Resource Utilization in the department of Agriculture. The study and analysis of the geological processes contributing to the a) formation of earth's relief, b) soils genesis and deposition and c) subsurface structure is strongly related to the rational management of natural resources and the environment. The course aims at introducing students to the basic concepts of Geology-Hydrogeology of the agricultural environment providing the basic tools for the implementation of projects/studies related to the study of the Natural Resource Utilization.
